EDUCATION

Master in Data Science & Artificial Intelligence 2025 – Rosario, Argentina
EBIS Business Techschool – *Expected September 2025*

Graduate Diploma in Generative AI Application Development 2025 – Rosario, Argentina
EBIS Business Techschool – *Completed*

Licentiate in Data Science 2024 – Rosario, Argentina
Universidad del Gran Rosario (UGR) – *Completed*

TOEFL Certificate (C1) 2024 – Rosario, Argentina
ETS

Programming Technician 2022 – Rosario, Argentina
Universidad Austral – *Completed*

Industrial Engineering (Basic Cycle) 2017 – Rosario, Argentina
UNR – Universidad Nacional de Rosario – *3 years completed, incomplete*

Bachelor in Humanities 2015 – Rosario, Argentina
Stella Maris High School

EXPERIENCE

Programmer Analyst Consultant Deloitte · 2022 – Present

- Designed and implemented **MuleSoft** integrations
- Development of **Salesforce** integrations
- Built and maintained data pipelines with **Python** and **SQL** for analytics and reporting.
- Collaborated with international teams under **Agile** practices (Jira, Git).

Technical Service 2018 – Present

- PC repair, OS deployment, preventive maintenance and performance optimization.

Commercial Employee Ciccioelec S.A. · 2021 – 2022

- Customer assistance, product catalog management and order tracking.

Field Hockey Coach Jockey Club Rosario · 2016 – Present

- Team leadership, planning and performance tracking; development of teamwork and communication skills.

Mechanic Secure Glass · Olbia, Sardegna, Italy · 2016 – 2017

SELECTED PROJECTS

Price Intelligence for Construction Materials Python · Selenium · Pandas

- Developed web scrapers for multiple retailers to compare prices and discounts; automated CSV/JSON export and dashboards.
- Built a modular architecture to easily add new stores; implemented data cleaning and ETL pipelines for price history analysis.
- Applied machine learning models to forecast price trends and detect anomalies, improving decision-making in material purchases.
- Integrated AI-based predictions into dashboards for real-time insights and business recommendations.

Vehicle License Plate Recognition System Python · OpenCV · YOLOv8 · OCR

- Developed and deployed an Automatic License Plate Recognition (ALPR) system using computer vision and deep learning.
- Implemented detection with YOLOv8 and preprocessing with OpenCV to handle varied lighting and angle conditions.
- Integrated OCR models to extract plate numbers and store them in a structured database for further analysis.

Hockey Club Performance System Python · Django (planned) · Analytics

- Data model for players, measurements, and evaluations (physical, technical, attitudinal).
- Role-based inputs (coach, trainer, physio) and dashboards for performance tracking.

School Uniform Ordering Platform Web · Next.js (planned)

- Landing pages per school with product selection by size; order collection and admin panel.
